Thanks Kerry. Any news on the data gaps plan and other shorter term items raised over the last few weeks?

Thanks Kerry. This is within the OU2/3 study area, correct?

Rob

Kerry,

As we have discussed in previous meetings, SBWRD is in the planning and design phase of a project to rehabilitate our 7.3-mile-long Silver Creek trunk sewer from Park City to our Silver Creek Water Reclamation Facility.

While we are planning to install a CIPP liner in most of the line, which will not require any excavation, a 500' section that crosses under SR-248 just East of the US-40 Interchange will need to be replaced by boring under the highway and open cut for a few hundred feet each side of the highway. We need to accomplish this phase of the project this year. You may have been contacted by one of our engineering consultants regarding disposal of the excavated material at the Richardson Flat Repository. Would it be possible to meet with you to further that discussion? This section of the trunk sewer is located within OU3 and the soils that will be removed with the project would be part of the soils removed or mitigated as part of future cleanup effort.

Thank you for your time.

Mike

Mike:

Yes I would. Perhaps not for lunch but maybe coffee in the morning? I usually go past Kimball Junction by 7:15 AM most mornings. I am not working this Thursday or Friday however.

Let me know what works for you.

Thanks

Kerry

Kerry,

Would you have a few minutes, lunch possible, to discuss the Lower Silver Creek OU2/3 Project?

Thanks,

Mike

Kerry,

Checking in for the current status of the project and progress since our meeting last August. We will soon be hiring a consultant to start the planning/design effort for our sewer trunk line relining/rehabilitation project and would like to base that effort on the most current OU2/3 information.

Any information you can provide would be greatly appreciated.

Thanks

Subject: RE: Update

Mike:

We have completed 2 rounds of surface and groundwater sampling for the entire floodplain. On Monday of next week (7/27/15) we will begin soil sampling and will have a small mini-excavator with us doing most of the work. We have to complete two more rounds of water sampling by the end of 2015.

We have completed a Draft damage assessment plan but have not started on the Restoration Alternatives Analysis.

I just sent to you an email regarding the meeting on August 11, 2015.

United Park resources are stretched as you could imagine.

Kerry

Hello Kerry,

Just checking-in to get an update on the OU2/3 Project. Any idea when the alternative study will be completed? Is EPA still planning to hold a meeting?

Thanks,

Mike

Subject: Update

Mike:

I hope you are well. I did get your phone message from the other day. I have been very busy and I am now finally catching up to you.

In regards to the OU2/3 Project in Silver Creek, we have completed the first round of surface water sampling. This summer is going to be very busy. We will do three more water sampling events this year (one each quarter) along with the soil, sediment and macroinvertebrates. The water sampling took 6 days this first time but I suspect as the summer dries things the remaining events won't take as long. The soil and sediment events will probably take over a week.

We are currently negotiating with BLM, DOI and Fish and Wildlife a Damage Assessment Plan. I suspect it won't take too much longer to finalize as some of the sampling we are going to be doing this summer will also address Natural Resource Damage issues.

The EPA is talking about having a public meeting sometime in May but it's date and time have not been finalized.

I hope you are well and call any time. Although email is probably a better way to communicate with me.

Thanks

Kerry
